

Nikol Beauty — Full Section Audit (headings & accessibility)

120 sections. Agency: 24 · Custom: 21 · Default: 64 · App: 11. **24** flagged (⚠ = has title/heading-styled elements but zero real <h1–h6> tags — top candidates for heading fixes).

Origin labels: **Agency** = old agency, not yet cleaned · **Custom** = theme-owned, already [Custom]-renamed · **Default** = stock Broadcast · **App** = app-injected.

Columns: **Used** = # templates/section-groups placing it (0 = unused) · **h1–6** = real heading tags · **Title els** = div/span/p with a title/heading class (heuristic — likely non-semantic headings to convert) · **img no-alt** = tags missing an alt attribute (raw imgs only; images via the theme's image snippet aren't counted).

Caveat: "Default" is determined by matching the Broadcast-Original reference folder, which is a slightly different Broadcast version — so a few genuinely-stock sections may show as "Agency". Verify borderline ones.

Agency24

Built by the previous agency, not yet cleaned/renamed — most likely to need heading + a11y work.
